

Practical 3 TextField, SnackBar, Padding and ListView Widget

Exercise 3.1

Create a new Flutter project to implement a BMI app.

- a. AppBar with text “BMI Calculator”
- b. Two TextFields, which accepts only numbers, for user to enter height and weight.
- c. A button “Calculate”
- d. Clicking the button will check for any blanks. If yes, output snack bar to remind user to fill in both height and weight. If both TextFields are filled, compute the BMI and display the BMI in a Text Widget (2 decimal places).
